

Dear Admissions Committee,

I am writing to express my strong interest in the **Digital International Program (DIGIT)** at **Sorbonne University**. I have completed my **Bachelor of Science in Information Technology (BS IT)** from the University of Gujrat, and I am highly motivated to continue my studies in an international and research-oriented environment. The flexibility offered by the DIGIT program, especially the possibility to design a personalized curriculum and specialize in areas like **Networks or Image Processing**, perfectly matches my academic interests and career goals.

During my undergraduate studies, I developed a solid foundation in core areas such as **programming, data structures, databases, computer networks, and software engineering**. These subjects helped me build strong analytical and problem-solving skills. Alongside this, I studied **calculus, linear algebra, and probability & statistics**, which provided me with the mathematical understanding required for advanced topics such as **signal processing, data analysis, and computer vision**. Over time, I became particularly interested in how data and visual information can be processed to create intelligent and efficient systems.

In addition to my academic background, I have gained practical experience as a **Flutter Developer** at **Technoverse, M2Logix, and Eaziex**. In these roles, I worked on developing and maintaining mobile applications, where I was involved in **API integration, real-time data handling, and improving system performance**. At Technoverse, I worked on applications that included **live tracking and notification systems**, which gave me practical exposure to handling dynamic data in real-time environments. This experience strengthened my understanding of how modern systems operate and how software solutions are designed to handle complex data flows.

I have also worked on several projects that reflect my growing interest in intelligent systems and image-based technologies. One of my key projects, the **Smart Bus Finder application**, involved implementing **machine learning (YOLO)** for number plate detection. This project introduced me to the basics of **computer vision and image processing**, and allowed me to understand how visual data can be analyzed to solve real-world problems. This experience played an important role in shaping my decision to pursue further studies in areas related to **image processing and data-driven technologies**.

The **DIGIT program at Sorbonne University** particularly attracts me because of its **flexible structure and international focus**. I am especially interested in the **Image Processing specialization**, as it closely aligns with my academic background and project experience. At the same time, I am also interested in expanding my knowledge in **network systems**, as I believe that combining networking and data processing skills is essential for building modern intelligent systems. The opportunity to select courses in English and design a personalized study path will allow me to focus on the areas that best support my career goals.

I am also very interested in the project-based learning approach offered in the DIGIT program. The possibility of working on **projects or extended projects** will allow me to gain deeper

knowledge in specialized areas such as **computer vision, signal processing, or data analysis**, even when course availability is limited. I am particularly motivated to engage in such projects, as they provide practical experience and encourage independent learning, which I consider very important for personal and professional growth.

Studying at **Sorbonne University**, one of the most prestigious institutions in France, will give me the opportunity to learn in a **high-quality academic environment with strong research and international exposure**. I am eager to work with experienced faculty members, collaborate with students from diverse backgrounds, and take part in innovative learning approaches such as **flipped classrooms and learning-by-example methods**. I believe this environment will help me grow both academically and personally.

Coming from Pakistan, where opportunities in advanced fields like **image processing, signal processing, and international-level research** are still developing, I see this program as an important step toward achieving my long-term goals. I aim to build a strong career in **computer vision and intelligent systems**, and to contribute to developing innovative technologies that can solve real-world problems.

I am a motivated, hardworking, and adaptable individual, ready to take on the challenges of studying in an international environment. I am confident that the **DIGIT program at Sorbonne University** will provide me with the knowledge, skills, and exposure needed to succeed in the field of **digital technologies and intelligent systems**.

Thank you for considering my application.

**Sincerely,
Muhammad Shakir**
